Research Interest

My research focuses on technology management, innovation strategy, and product innovation, with an emphasis on supporting strategic decision-making under technological and market uncertainty. My interests include innovation strategy, disruptive and radical innovation, product development, technology strategy, and multi-criteria decision-making, aiming to help organizations identify and implement effective innovation opportunities.

Qualification

M.Sc. in Technology Management, [University of Isfahan](#), Isfahan, Iran

Thesis Title: The Proposing of an Integration Decision-Making Framework for Determining Innovation and Productive Strategies, Based on Innovation and Ansoff Matrices Using a New Model, SMART Criteria, and MCDM: The Case of [Entekhab Industrial Group](#).

GPA: 17.79 / 20

B.Sc. in Industrial Management, University of Isfahan, Isfahan, Iran

Graduated September 2024

GPA: 16.96 / 20

Diploma in Humanities, National Organization for Development of Exceptional Talents ([NODET / Sampad](#)), Isfahan, Iran

Graduated September 2020

GPA: 18.48 / 20

Skills

- Admitted through the National Exceptional Talents Admission Scheme
- Worked in the Quality Assurance Department at International Company [IRISA](#), contributing to quality improvement, strategic planning, and innovation-focused initiatives.
- Languages:** Persian (Native), English

Research Interests

- Innovation Management and Strategy
- Radical vs. Incremental Innovation; Architectural & Disruptive Innovation
- Multi-Criteria Decision Making (TOPSIS, Kano, AHP)
- Business Growth Strategies (Ansoff Matrix)
- Circular Economy in the Home Appliances Industry

Thesis & Projects

- Master's Thesis**
The Proposing of an Integration Decision-Making Framework for Determining Innovation and Productive Strategies, Based on Innovation and Ansoff Matrices Using a New Model, SMART Criteria, and MCDM: The Case of Entekhab Industrial Group.
[The main problem of this research is the lack of a comprehensive and measurable framework for systematically selecting and prioritizing innovation and product strategies under dynamic market, technological, and customer conditions. The main objective is to develop an integrated decision-making framework that enables organizations to identify and select the most appropriate innovation and product strategies based on market impact and customer needs.]
- An Integrated Framework for Explaining Innovation and Product Development Strategies Based on the Innovation Matrix, Ansoff Matrix, and Kano Model**
- From the Yakhchal to the Two-Door Refrigerator: Historical Foundations, Market Dynamics, and an Incremental Innovation Strategy for the Domestic Refrigeration Industry**

Achievements

- Admitted to Sampad (National Organization for Development of Exceptional Talents)
- Strong academic record at top Iranian universities.
